**Subject:** energy savings

Dear City Council

I would like to share with you some rough numbers concerning energy savings expressed in gallons of fuel per year

An average home photo voltaic system can save the equivalent of 1,300 gallons per year

1 Mega commuter living in the Baylands can save the equivalent of 3,500 gallons per year

What business operating on the Baylands saves 2,000,000 gallons of fuel per year?

Thank you all for all you do.

Respectfully Bill Dettmer
