**Subject:** Baylands may have the botched cleanup soil from remediation work.

My dear Brisbane City Council Members,

Learn about the botched cleanup soil remediation work where hot highly toxic soil from Hunters point end up where we do not know. Could some be in our back yard the Baylands?

Please review the 5 min video. Around 2:11 min. into this NBC Bay Area investigative news report video you see dump trucks shipping soil not properly cleared for high radioactive levels on the soil with radium cesium and strontium because it was found out someone with the company Tetra Tech rigged monitoring units or tampered them to allow "8.5 deviations above background" instead of 6 a big difference in this area that allowed hot radioactive material to be dumped in so far undisclosed locations which I can only speculate included the Baylands.

How can the public trust that these private for profit companies will not cut corners for profits when it comes to cleaning up the Baylands when we see reports like this of such gross violations?
